EXPERTISE

Field
Computer Science

Expertise
Searching Techniques
Java/C++ Programming

Specialization
Programming
Software Development
Information Retrieval

EDUCATION

Bach. in Computer Science. Software Eng. (Hons) (UTM)

MSc. in Science. Computer Science (UTM)

RESEARCH CONTRIBUTION & ACHIEVEMENT

At the broadest level, my research interests focus on intelligent information access; this entails developing retrieval technology that supports humans in dealing with massive volumes of data. The topical areas I am particularly interested in are entity retrieval, information needs, semantics, and evaluation.

Previously, I have worked extensively on expertise retrieval (mostly as part of my master project). While working on these themes, I focus on two distinct but complementary methodological aspects: text retrieval and Malay stemming.
